EDUCATION

Integrated M.Tech in Computer Science and Engineering

VIT Bhopal University (Computational and Data Science)

2022 – 2027

CGPA: 8.69/10

TECHNICAL SKILLS

- Languages: Java, Python, SQL, JavaScript
- Frontend Technologies: React, Next.js, Tailwind CSS
- Backend Technologies: Spring Boot, Node.js, Hibernate, JPA, REST APIs, JWT Authentication
- Databases: MySQL, PostgreSQL, Docker

EXPERIENCE

Data Analyst Intern

INFLYNX Technologies

- Developed and optimized Spring Boot REST APIs for a farm produce logistics platform, improving backend response performance.
- Implemented JWT-based authentication and role-based authorization across 10+ API endpoints, strengthening application security.
- Designed MySQL database schemas and mapped 10+ entities using JPA/Hibernate, enabling scalable data persistence and efficient backend operations.
- Collaborated with a cross-functional team to integrate APIs across inventory management, shipment tracking, and business reporting workflows.

PROJECTS

ToneShift – AI Email Tone Rewriter

GitHub

Tech Stack: React, Spring Boot, PostgreSQL, JWT, OpenRouter AI, Render, Vercel

- Built a production-ready full-stack AI platform to transform email tone (Formal/Professional/Friendly).
- Engineered and secured 10+ REST APIs using Spring Boot, implementing stateless JWT authentication to protect sensitive user data and ensure secure communication.
- Integrated OpenRouter AI API and optimized PostgreSQL indexing, reducing average response time from 2.1s to 1.4s during testing.

PricePilot – AI-Powered Grocery Cost Optimization Platform

GitHub

Tech Stack: Java, Spring Boot, PostgreSQL, React, Tailwind CSS, JWT Authentication, REST APIs, OpenAI API

- Built a full-stack grocery optimization platform supporting 500+ products, enabling users to create shopping lists, compare prices across multiple retailers, and manage grocery purchases through an interactive React dashboard.
- Developed a basket optimization engine that evaluated 1,000+ product-store combinations and generated cost-efficient purchasing plans, achieving up to 25% savings through intelligent store selection and price comparison.
- Integrated an AI-powered grocery planner using OpenAI APIs to generate personalized shopping baskets based on budget, dietary preferences, family size, and nutrition goals, while exposing 20+ RESTful APIs for optimization and recommendation workflows.

Allo Reservation System – Multi-Warehouse Inventory Reservation Platform

GitHub

Tech Stack: Next.js, TypeScript, Prisma, PostgreSQL, Supabase, Vercel

- Architected a multi-warehouse inventory reservation platform supporting 5 reservation states (Pending, Confirmed, Released, Expired, Cancelled) for inventory lifecycle management.
- Designed a PostgreSQL database with 4 core entities (Product, Warehouse, Inventory, Reservation) and relational mappings for inventory allocation across multiple locations.
- Enforced data integrity using Prisma relations and composite uniqueness constraints, ensuring consistent inventory tracking per product-warehouse pair.

CERTIFICATIONS

- **Applied Machine Learning** – Coursera Certificate
- **Enterprise Data Science in Practice** – IBM SkillsBuild Certificate
- **Software Engineering Virtual Experience** – JPMorgan Chase & Co. Certificate
